

**September 28, 2001**

**Exhibit A**  
**Origin Bulk Citrus Requirements**

- 1) Grower shall allow the County Agricultural Commissioner (CAC) onto the premises to monitor compliance of this agreement.
- 2) Grower/representative shall inspect bed and cab of truck for viable GWSS life stages and remove any GWSS that are found before loading and immediately following loading of bins.
- 3) Grower/representative shall inspect bins as they are being loaded and remove any bins that have any viable life stages of GWSS. Bins found with GWSS can be reconditioned to remove the viable life stages.
- 4) Grower/representative shall notify the (CAC) no later than 72 hours prior to harvest of their intent to ship bulk citrus fruit.
- 5) Grower/representative shall assure that a compliance certificate tag accompanies all bulk citrus fruit shipments from counties with an infested area and the compliance certification tag shall be given to the processor.
- 6) Grower/representative shall inform the destination (CAC) of any diverted bulk citrus fruit shipments, including its final disposition.
- 7) Grower/representatives shall ensure that compliance certificate tags are used in the following manner:
  - a) Compliance certificate tags shall accompany all bulk citrus fruit shipments from infested counties or counties with an infested area when destined for or when transiting any non-infested area.
  - b) Green-punched compliance certification tags shall be issued for bulk citrus fruit shipments originating from groves located in the non-infested area of a county with an infested area.
  - c) Grower/representative shall retain the grower's copy of the compliance certification tag.
  - d) Yellow-punched compliance certification tags shall accompany all bulk citrus fruit shipments from the infested area of a county when the grove is found free from the GWSS based upon trapping or visual surveys by the (CAC).
  - e) Yellow-punched compliance certification tags shall accompany bulk citrus fruit shipments when originating from groves within infested areas that are treated prior to harvest with an approved pesticide.
  - f) Yellow-punched compliance certification tags shall accompany bulk citrus fruit shipments when originating from groves within infested areas that are destined to a treatment facility within the infested area.

- 8) Compliance certificate tags are not required on bulk citrus fruit shipments originating from non-infested counties or remaining within the infested areas (no transiting of non-infested areas).
- 9) When bulk citrus fruit shipments from an infested area will transit any non-infested area while in transit to another infested area, the bulk citrus fruit shall be harvested, handled, or treated and safeguarded in a manner approved by the Department or CAC to eliminate all live GWSS.
- 10) The compliance certificate tag shall remain with the assigned citrus fruit shipment from origin to destination.
- 11) When three (3) bulk citrus shipments (from infested areas to non-infested areas) have been found infested with live GWSS by the origin or destination (CAC) for the same grove/block, the grower/representative shall not ship or present for certification any citrus until additional mitigation measures to eliminate viable GWSS life stages are implemented by the grower/representative and verified by the (CAC), if the grower/representative wishes to continue to transit or ship to non-infested areas. After monitoring of the mitigation measures, the (CAC) may reinstate the grower/representative for shipping to non-infested areas.
